

9) exception implicit object

 [javatpoint.com/exception-implicit-object](https://www.javatpoint.com/exception-implicit-object)

In JSP, exception is an implicit object of type `java.lang.Throwable` class. This object can be used to print the exception. But it can only be used in error pages. It is better to learn it after page directive. Let's see a simple example:

Example of exception implicit object:

error.jsp

1. `<%@ page isErrorPage="true" %>`
2. `<html>`
3. `<body>`
4. Sorry following exception occurred: `<%= exception %>`
5. `</body>`
6. `</html>`
