

JSP request implicit object

 javatpoint.com/request-implicit-object

The **JSP request** is an implicit object of type `HttpServletRequest` i.e. created for each jsp request by the web container. It can be used to get request information such as parameter, header information, remote address, server name, server port, content type, character encoding etc.

[<<prev](#) [next>>](#)

It can also be used to set, get and remove attributes from the jsp request scope.

Let's see the simple example of request implicit object where we are printing the name of the user with welcome message.

Example of JSP request implicit object

index.html

1. `<form action="welcome.jsp">`
2. `<input type="text" name="uname">`
3. `<input type="submit" value="go">
`
4. `</form>`

welcome.jsp

1. `<%`
2. `String name=request.getParameter("uname");`
3. `out.print("welcome "+name);`
4. `%>`

Output
